REDEEMED ROUTE LOGISTICS INC. - ROUTEX

Revisions Summary & QA Testing Checklist

237/237 Tests Passing | TypeScript Clean

1. Dashboard Refinements & Graph Increments (/dashboard)

Files: dashboard/page.tsx, dashboard-kpi.ts, date-range-utils.ts, globals.css

- Top Client Card Vertical Centering & Dynamic Sizing: Wrapped the client name in a flex-centered .stat-client-body container so it sits vertically centered between TOP CLIENT and the revenue/trips subtitle. Added 5 dynamic font-size tiers (34px down to 13px) based on total text length and longest word length so any client name fits without overflowing.
- Revenue Over Time Graph & Comparison Series: Renamed the comparison view to 'All' with clear 3-series labeling (Revenue, Expenses, Profit).
- Graph Time Increments: Updated X-axis buckets by active preset: This Week = Mon to Sun, This Month = Per Week (Wk 1-Wk 5), This Year = Per Month (Jan-Dec).
- This Year Filter & Recent Deliveries: Fixed This Year preset date bounds (Jan 1 through today) and tightened whitespace in the Recent Deliveries table.

QA CHECKLIST TO TEST:

[ ] Switch date filter between This Week, This Month, This Year, and All Time; verify X-axis labels match Mon-Sun, Per Week, and Per Month.

[ ] Verify Top Client name is vertically centered in the card and scales cleanly for short, multi-word, and tied client names.

[ ] Toggle the 'All' metric tab on the Revenue Over Time graph and verify Revenue, Expenses, and Profit bars/lines align with the legend.

2. Design Preferences (Sidebar & Topbar Profile Dropdown)

Files: account-control.tsx, design-preferences.ts, layout.tsx, globals.css

- Profile Dropdown Submenu: Added 'Design Preferences' inside the profile dropdown right next to Account Settings and Dark Mode.
- Font Size: Small, Default, Large (scales interface typography across pages, tables, forms, and navigation).
- Compactness: Comfortable vs. Compact (adjusts table row padding, card spacing, and form density).
- Reduce Motion: Off vs. On (disables non-essential animations and respects OS reduced-motion preferences).
- Per-Account Persistence & Reset: Stored per user ID in localStorage, restored on load in both Light and Dark mode, with a Reset to Default action.

QA CHECKLIST TO TEST:

[ ] Open profile dropdown -> click Design Preferences -> test Small / Default / Large font size and Comfortable / Compact density.

[ ] Toggle Reduce Motion and Dark Mode; reload the page to verify preferences persist for your user account, then click Reset to Default.

3. Record Delivery UI Cleanup & Input Validation (/deliveries/new)

Files: deliveries/new/page.tsx, edit-delivery-modal.tsx, delivery-input-utils.ts, rounded-select.tsx

- UI & Spacing Refinements: Removed redundant explanatory banners and duplicate headings; tightened form grid spacing and financial summary sidebar alignment.
- Numeric/Currency Fields (Delivery Rate, Diesel, Tolls, Allowances, Daily Rates, Other Expenses, Store Entry Fees, Distance, Fuel Rate): strictly block letters and invalid symbols (e, +, -), allowing only digits and a single decimal point.
- Person / Crew Name Fields (Driver, Helpers, Contact Person): strip numeric digits so numbers cannot be typed into person names.
- Waybill & Document Reference Fields: normalize to uppercase alphanumeric characters and hyphens.

QA CHECKLIST TO TEST:

[ ] On /deliveries/new and in the Edit Delivery modal, attempt to type letters into any Peso amount, distance, or entry fee field (should be blocked).

[ ] Choose custom Driver/Helper name in the dropdown and attempt to type numbers into the person name field (should be blocked).

4. Clean Data-Only Delivery Preview & Removal of Confirmation Prompts (/deliveries)

Files: deliveries/new/page.tsx, deliveries/page.tsx, deliveries/[id]/page.tsx, confirm-delivery-deletion-dialog.tsx, delivery-financial-breakdown.tsx, delivery-dropoff-timeline.tsx, record-detail-drawer.tsx

- Data-Only Preview Delivery (/deliveries/new): Clicking 'Preview delivery' displays a clean summary of the inputted data across 01 Trip details, 02 Store drop-offs, 03 Rate & expenses, and 04 Documents with 'Back to edit' and 'Record delivery' buttons-without any 'Confirmed Financials' badges or confirmation clutter.
- Entry Fee Field Simplification: Removed the 'Confirm PHP 0' prompt button on store entry fees; typing 0 or an amount records it directly.
- Simplified Deletion Modal: Removed the mandatory deletion reason dropdown and notes requirement when deleting a delivery.
- Terminology Cleanup: Removed 'Confirmed / Unconfirmed / Pending Confirmation' wording and badges across delivery views.

QA CHECKLIST TO TEST:

[ ] On /deliveries/new, fill out a delivery and click 'Preview delivery' to verify it previews only the inputted data (Trip details, Store drop-offs, Rate & expenses, and Documents) with 'Back to edit' and 'Record delivery' actions and no 'Confirmed Financials' badges.

[ ] Inspect a delivery at /deliveries/[id] and in the quick-view drawer to verify no 'Confirmed / Unconfirmed' prompts or badges appear.

5. Plain Text Instead of Pill Badges in All Tables & Ledgers

Files: deliveries/page.tsx, dashboard/page.tsx, pod-documents/page.tsx, truck-profitability/page.tsx, user-management/page.tsx, audit-state-changes.tsx, reports/page.tsx, report-customizer-modal.tsx, settings/page.tsx, delivery-import-client.tsx, globals.css

- Removed all pill backgrounds, borders, border-radii, padding, and status dots inside every <table> and .table-wrap ledger across RouteX:
- Deliveries & Dashboard Tables: Drop-offs store count ('2 stores', '2 drop-offs') and Net Profit margin percentage render as plain text.
- POD Documents, Excel Import & Subcontracted Trucks Tables: 'Attached' / 'Missing', 'Valid' / 'Invalid', and 'Cold' / 'Dry' render as plain text.
- User Management, Audit Trail, Reports & Settings Tables: Staff status columns, Audit Action/Entity/State Changes, Report status cells, Customizer Data Type, and Settings Role Permissions ('(Your Role)' and Access Level) render as plain text.

QA CHECKLIST TO TEST:

[ ] Check tables in Deliveries, Dashboard, POD Documents, Trucks, Reports, Settings, and User Management in both Light and Dark mode to confirm no pill boxes or dots appear inside table cells.

6. Trucks Terminology ('Crew') & Reports Printing + Date Filter

Files: truck-profitability/page.tsx, truck-profitability/[plate]/page.tsx, reports/page.tsx, globals.css

- Trucks Module ('Crew'): Renamed 'Drivers and Helpers' to 'Crew' across the Trucks page, action buttons ('+ Add Crew'), and truck detail pages, and shortened verbose tooltips on truck cards.
- Reports In-Page Date Filter: Moved the date range filter out of the topbar and placed it directly inside the Reports toolbar (.report-tabs-bar) right next to the report format tabs.
- Reports Print / PDF Layout Fix (@media print): Released scroll/overflow containers so multi-page reports never clip, hid all navigation/buttons in print, rendered all report rows (not just the current pagination page), and preserved the 2-column visual breakdown charts and summary KPIs.

QA CHECKLIST TO TEST:

[ ] Visit /truck-profitability and verify 'Crew' labels and concise tooltips on Owned and Subcontracted trucks.

[ ] Visit /reports, change the date range using the in-page date filter next to the report tabs, and press Print (Ctrl+P) to verify the print preview matches the report preview across all pages.
