SWOT ANALYSIS

Redeemed Route Logistics Inc.

PROJECT TITLE

May 03, 2026

Benares, Louiza Joy C.
Punongbayan, Jelene C.
Bongalos, Marc Rancel

I. SWOT IDENTIFICATION:

STRENGTHS	WEAKNESSES
● Strong client trust and delivery assurance ● Proactive delivery updates every 30 minutes to 1 hour. ● Clear and structured delivery workflow. ● Well-trained delivery crew and drivers. ● Strict quality control and documentation standard. ● Established organizational structure (Finance, HR, Operations, Monitoring) ● Professional appearance and workplace conduct ● Regular operational meetings for continuous improvement. ● Strong values in integrity, discipline, and teamwork. ● Wide Luzon service coverage. ● Scalable fleet of owned and subcontracted trucks. ● Real-time delivery monitoring through cloud DVR dashcams. ● Active social media branding and professional company image.	● No centralized logistics or ERP system. ● Heavy reliance on group chat for coordination and real-time tracking . ● Limited tracking for subcontracted trucks. ● Difficulty maintaining daily trip reports manually. ● No automated analytics for route, cost, and profit monitoring. ● Cash flow dependency caused by delayed collections ● Occasional POD documentation errors and incomplete signatures.
OPPORTUNITIES	**THREATS**
● Development of a logistics and analytics system. ● Expansion of operations to Visayas and Mindanao market. ● Integration of air freight services for faster deliveries. ● Integration of sea freight services (FCL and LCL). ● GPS deployment for full fleet visibility. ● Digitalization of compliance and government reporting.	● Rising fuel prices increasing operational costs. ● Clients shifting to lower-priced competitors. ● Cash flow disruptions from delayed collections. ● Traffic, permit restrictions, and area access limitations. ● Truck breakdowns and cooling system failures. ● Price-based competition in the logistics industry.

II. SWOT STRATEGIES

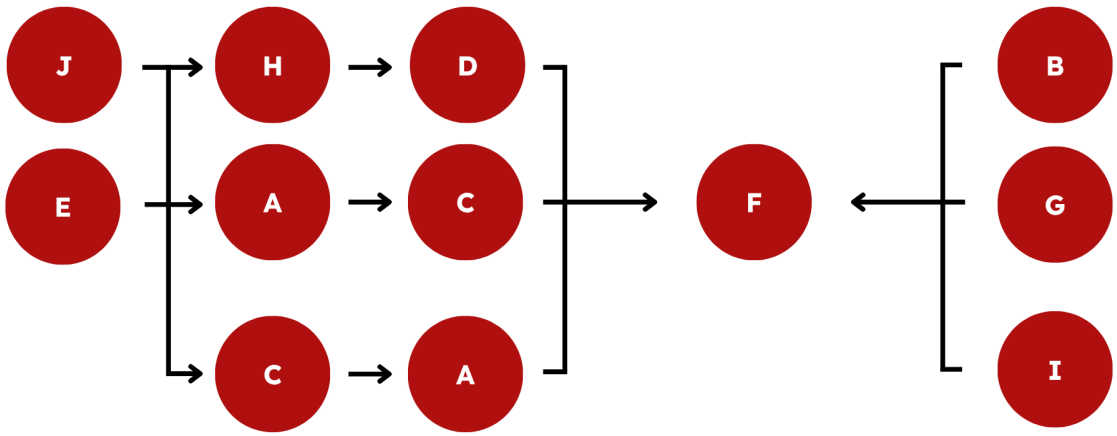

Environmental Factors Own Specific Factors	External Opportunities	External Threats
Own Strengths		
1. Proactive Real-Time Delivery Monitoring	Use the company's consistent 30-minute updates as a service advantage when approaching clients in the food and logistics sector.	Maintain client trust through consistent communication and real-time updates to reduce client switching despite lower competitor pricing.
2. Well-Trained Delivery Crew with Integrity and Discipline	Use trained crews to meet food service compliance standards and support operational efficiency and business expansion.	Maintain discipline and professionalism to reduce operational risks and protect the company's reputation during delivery disruptions and service issues.
3. Existing Monitoring Practices on Owned Fleet	Use the current cloud DVR as a foundation for a more advanced logistics system with future integration of GPS tracking, analytics, and automation.	Use monitoring data such as dashcam recordings and trip updates to verify delivery issues and improve dispute resolution, reducing liability risks during operations.
Own Weaknesses		
1. No Centralized Logistics Management System	Implement a logistics and analytics system to track deliveries by plate number, costs, and margins to support expansion to Visayas and Mindanao.	Rising fuel costs affect margins, and without a centralized system, it is difficult to consistently track profitability and respond quickly to cost changes, affecting financial stability.

2. Cash Flow Dependency Due to Collection Delays	Establish clearer billing and collection processes and structured payment to improve financial predictability and support daily operational needs.	Collection delays affect daily operations, and when combined with rising costs, they can slow or disrupt operations due to limited cash flow.
3. POD and Documentation Issues	Introduce a digital Proof of Delivery (POD) system or checklist to ensure complete signatures and documentation before leaving delivery sites, improving accuracy and efficiency.	Incomplete or incorrect documentation may cause delivery disputes or delays and affect client acceptance, risking trust and operational reliability.

III. PROBLEM IDENTIFICATION:

A. Truck failures
B. Sudden cancellation from clients
C. Road accidents
D. Missing or lost proof of deliveries
E. No system to monitor truck sub-units
F. Income generation and Revenue flow
G. Gas price hikes
H. Status of deliveries
I. Area restrictions
J. No Automated System

IV. PROBLEM STRATIFICATION:

V. PROBLEM PRIORITIZATION

Criteria:

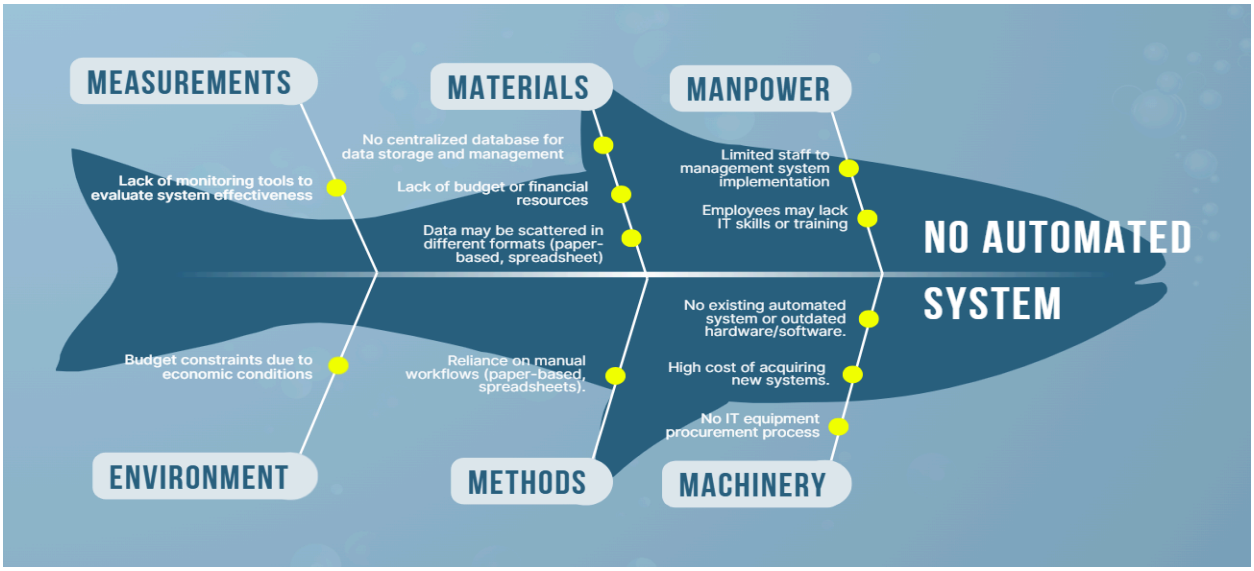

- Urgency
- Impact of productivity and quality
- Familiarity of members
- Solvability
- Implementability

Scoring Scale: 0 = Lowest, 10 = Highest

Main Problem	Urgency	Impact of productivity and quality	Familiarity of members	Solvability	Implementability	Total / Rank of Priority
No automated system	6	10	10	9	8	43 / Rank 1
Truck Failures	9	10	9	8	6	42 / Rank 2
Missing or lost proof of deliveries	8	10	8	6	8	40 / Rank 3
Income generation and Revenue flow	10	10	6	5	5	36 / Rank 4

VI. FISHBONE ANALYSIS

Main Problem: No Automated System
